-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 September 2003.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-22 are presented for examination.

Priority

2. A reference to the prior application No. 60/432,472, filed on December 11, 2002, application No. 60/443,894 filed on January 30, 2003, have been inserted as the first sentence(s) of the specification of this application or in an application data sheet (37 CFR 1.76). The claim for benefit of relying on the filing date of the prior application under 35 U.S.C. 119(e), 120, 121, or 365(c) is acknowledged.

Specification

3. The disclosure is objected to because of the following informalities: Information provided in paragraph [02] of the specification is incomplete. US Patent Application number is missing in the Incorporation by Reference section. Appropriate correction is required.

Claim Objections

4. Claim 20 is objected to because of the following informalities: Claim 20 is having exactly the same limitation as recited in claim 6. Claim 20 is rejected for the same reason as provided in claim 6, and should be removed or amended. Appropriate correction is required.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 10-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
7. Claim 10 recites the limitation "the first home" in line 3, and the limitation "the second home" in line 5. There is insufficient antecedent basis for this limitation in the claim. The Examiner views the limitations as "a first home" and "a second home" for further examination.
8. All dependent claims are rejected to as having the same deficiencies as the claims they depend from.

Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

10. Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lu, US

Patent Number 7,065,778 B1, hereinafter Lu, in view of Cohen et al., US Patent Number 6,963,358, hereinafter Cohen.

Art Unit: 2155

11. Referring to claim 1, Lu teaches a system supporting the indirect control of at least one media peripheral, the system comprising:

a first television display (display 212 of PVR 200; Col 6 lines 21-28, figure 3) in a first home (the place where PVR 200 resides corresponds to “a first home”; Col 6 lines 43-61, Col 1 lines 64-67, figure 3);

a first storage in the first home (data storage device 218 of PVR 200 corresponds to “a first storage”), the first storage for storing media (Col 10 lines 26-29, 40-43, data storage device 218 of a PVR is used for storing TV programs for future viewing), and having an associated first network protocol address (IP address of PVR 200 corresponds to “an associated first network address”; Col 10 lines 10-15, each PVR is associated with an IP address);

a second storage (data storage device 218 of PVR 200A, figure 2) in the second home (figure 3, PVR 200A is physically separated from PVR 200, Col 6 lines 43-61, Col 1 lines 64-67), and having an associated second network protocol address (IP address of PVR 200A corresponds to “an associated second network address”; Col 10 lines 10-15, each PVR is associated with an IP address);

server software (EGP server 304) that receives via a communication network (Internet 302 corresponds to “a communication network”; figure 3) a request (Col 9 lines 8-10, 29-44, server receives a request from PVR 200) that identifies one of the associated first and second network protocol addresses (IP address of PVR 200) by a user at the first home (Col 10 lines 10-15, IP address of PVR 200 is identified as the requester), and responds by identifying the other of the associated first and second network protocol

Art Unit: 2155

addresses (Col 6 lines 45-50, network address of PVR 200A is located (identified) for server to send request to record desired TV shows) to support control from the first home, via the communication network (Col 6 lines 54-58, PVR 200A is used to record desired media requested from PVR 200, and once PVR 200A obtains the media, PVR 200A transmits the media to the EGP server 304, which then transmits the media to the requested PVR 200).

Lu does not teach at least one media peripheral, in the second home, communicatively coupled to the second storage; and the server software that receives a request that identifies one of the at least one media peripheral, and at least one media peripheral command selected by a user, and responds with media from the identified one of the at least one media peripheral, at the second home, according to the at least one media peripheral command.

Cohen teaches, at least one media peripheral (digital camera 10'), in a second home (the place where digital camera 10' resides corresponds to "a second home", figure 6A) communicatively coupled to the second storage (device 100b); and server software (server 808) that receives a request that identifies one of the at least one media peripheral, and at least one media peripheral command selected by a user (Col 13 lines 22-33, Col 14 lines 19-27, user requests to server for accessing and downloading data captured from digital camera 10'; user requested download corresponds to "the at least one media peripheral command"), and responds with media from the identified one of the at least one media peripheral (Col 14 lines 19-27, 60-67, image data captured from digital camera 10' is provided to requester 812, 910), at the second home (digital camera 10' resides at

second home), according to the at least one media peripheral command (Col 13 lines 22-33, Col 14 lines 19-27, user requests to download).

It would have been obvious to a person with ordinary skill in the art at the time the invention was made to incorporate at least one media peripheral of Cohen in Lu, because both Cohen and Lu teach a first device requests media information stored on a second device via a server (see figure 3 of Lu and figure 6A of Cohen).

A person with ordinary skill in the art would have been motivated to make the modification to Lu would allow the media data of a peripheral to be transmitted to a remote location and allow authorized individuals to gain access and retrieve the media data as taught by Cohen (Col 3 lines 29-31, and Col 4 lines 42-54).

12. Referring to claim 2, Lu as modified teaches the system of claim 1 wherein the first and second network protocol addresses are one of an Internet protocol (IP) address, a media access control (MAC) address, and an electronic serial number (ESN) (Lu, Col 10 lines 10-15, each PVR is associated with an IP address).
13. Referring to claim 3, Lu and Cohen in combination teaches the system of claim 1, and Cohen further teaches wherein the at least one media peripheral comprises at least one of a digital camera, a digital camcorder, an MP3 player, a home juke-box system, a multi-media personal digital assistant (PDA), a mobile multi-media gateway device (Col 14 lines 19-27, figure 6C of Cohen, peripheral in Cohen is a digital camera).
14. Referring to claim 4, Lu as modified teaches the system of claim 1 wherein the media comprises at least one of audio, a still image, video, and data (Lu, Col 7 lines 25-28,

Art Unit: 2155

network 300 operate with any type of media content: audio, video, graphics, information, data, and/or the like in any type of format).

15. Referring to claim 5, Lu as modified teaches the system of claim 1 wherein the media comprises real-time video (Col 7 lines 25-28; Col 6 lines 50-53, media being recorded are the requested TV show, which is recorded when it is broadcast (real-time video) by a TV provider).
16. Referring to claim 6, Lu and Cohen in combination teaches the system of claim 1, and Cohen further teaches wherein the at least one media peripheral command comprises at least one of on, off, select, play, capture, download, erase, delete, zoom, focus, pan, tilt, set compression format, set resolution, set frame rate, set quality, rewind, fast forward, scan, list, skip, and check status (Col 13 lines 22-33, Col 14 lines 19-27 of Cohen, user requests to server for accessing and downloading data captured from digital camera 10'; user requested download corresponds to "the at least one media peripheral command").
17. Referring to claim 7, Lu as modified teaches the system of claim 1 wherein the communication network comprises at least one of a cable infrastructure, a satellite network infrastructure, a digital subscriber line (DSL) infrastructure, an Internet infrastructure, an intranet infrastructure, a wired infrastructure, and a wireless infrastructure (Lu, Col 7 lines 1-8, PVR 200, 200A and EGP server 304 may be coupled via coaxial cable, copper wire, fiber optics, the Internet 302, wireless communication and the like).
18. Referring to claim 8, Lu as modified teaches the system of claim 1 wherein the communication network is the Internet (Lu, Col 7 lines 1-8, Internet 302).

19. Referring to claim 9, Lu as modified teaches the system of claim 1 further comprising: a user interface (EGP, electronic programming guide corresponds to “a user interface”), at the first home (where PVR 200 resides, figure 3 of Lu), for identifying at least one of the second home (Lu, Col 6 lines 45-50, PVR 200A is located), the at least one media peripheral, and the at least one media peripheral command (Cohen’s digital camera and downloading request, Col 14 lines 19-27); and the user interface supporting at least one media channel (Col 6 lines 35-61, user utilizes EPG to locate desired media).

20. Referring to claim 10, Lu teaches a system supporting the indirect control of at least one media peripheral, the system comprising:

a first storage (data storage device 218 of PVR 200) in a first home (the place where PVR 200 resides corresponds to “a first home”; Col 6 lines 43-61, Col 1 lines 64-67, figure 3) that stores media (Col 10 lines 26-29, 40-43, data storage device 218 of a PVR is used for storing TV programs for future viewing), and having an associated first network address (IP address of PVR 200 corresponds to “an associated first network address”; Col 10 lines 10-15, each PVR is associated with an IP address);

a second storage (data storage device 218 of PVR 200A, figure 2) in a second home (figure 3, PVR 200A is physically separated from PVR 200, Col 6 lines 43-61, Col 1 lines 64-67), and having an associated second network protocol address (IP address of PVR 200A corresponds to “an associated second network address”; Col 10 lines 10-15, each PVR is associated with an IP address);

set top box circuitry (PVR 200 corresponds to “set top box circuitry”; Col 5 lines 26-35), in the first home, communicatively coupled to the first storage and the second

Art Unit: 2155

storage (figures 2 and 3, PVR 200 is communicatively coupled to data storage device 118 of PVR 200 and PVR 200A);

server software (EGP server 304) that receives via a communication network (Internet 302 corresponds to “a communication network”; figure 3) a request (Col 9 lines 8-10, 29-44, server receives a request from PVR 200) that identifies one of the associated first and second network protocol addresses (IP address of PVR 200) by a user at the first home (Col 10 lines 10-15, IP address of PVR 200 is identified as the requester), and responds by identifying the other of the associated first and second network protocol addresses (Col 6 lines 45-50, network address of PVR 200A is located (identified) for server to send request to record desired TV shows) to support control from the first home, via the communication network (Col 6 lines 54-58, PVR 200A is used to record desired media requested from PVR 200, and once PVR 200A obtains the media, PVR 200A transmits the media to the EGP server 304, which then transmits the media to the requested PVR 200).

Lu does not teach at least one media peripheral, in the second home, communicatively coupled to the second storage; and the server software that receives a request that identifies one of the at least one media peripheral, and at least one media peripheral command selected by a user, and responds with media from the identified one of the at least one media peripheral, at the second home, according to the at least one media peripheral command.

Cohen teaches, at least one media peripheral (digital camera 10'), in a second home (the place where digital camera 10' resides corresponds to “a second home”, figure

6A) communicatively coupled to the second storage (device 100b); and server software (server 808) that receives a request that identifies one of the at least one media peripheral, and at least one media peripheral command selected by a user (Col 13 lines 22-33, Col 14 lines 19-27, user requests to server for accessing and downloading data captured from digital camera 10'; user requested download corresponds to "the at least one media peripheral command"), and responds with media from the identified one of the at least one media peripheral (Col 14 lines 19-27, 60-67, image data captured from digital camera 10' is provided to requester 812, 910), at the second home (digital camera 10' resides at second home), according to the at least one media peripheral command (Col 13 lines 22-33, Col 14 lines 19-27, user requests to download).

It would have been obvious to a person with ordinary skill in the art at the time the invention was made to incorporate at least one media peripheral of Cohen in Lu, because both Cohen and Lu teach a first device requests media information stored on a second device via a server (see figure 3 of Lu and figure 6A of Cohen).

A person with ordinary skill in the art would have been motivated to make the modification to Lu would allow the media data of a peripheral to be transmitted to a remote location and allow authorized individuals to gain access and retrieve the media data as taught by Cohen (Col 3 lines 29-31, and Col 4 lines 42-54).

21. Referring to claim 11, Lu as modified teaches the system of claim 10 wherein the media comprises at least one of audio, a still image, video, and data (Lu, Col 7 lines 25-28, network 300 operate with any type of media content: audio, video, graphics, information, data, and/or the like in any type of format).

22. Referring to claim 12, Lu and Cohen in combination teaches the system of claim 10, and Cohen further teaches wherein the at least one media peripheral comprises at least one of a digital camera, a digital camcorder, an MP3 player, a home juke-box system, a multi-media personal digital assistant (PDA), a mobile multi-media gateway device (Col 14 lines 19-27, figure 6C of Cohen, peripheral in Cohen is a digital camera).
23. Referring to claim 13, Lu as modified teaches the system of claim 10 wherein the first and second network addresses are one of an Internet protocol (IP) address, a media access control (MAC) address, and an electronic serial number (ESN) (Lu, Col 10 lines 10-15, each PVR is associated with an IP address).
24. Referring to claim 14, Lu as modified teaches the system of claim 10 wherein the communication network comprises at least one of a cable infrastructure, a satellite network infrastructure, a digital subscriber line (DSL) infrastructure, an Internet infrastructure, an intranet infrastructure, a wired infrastructure, and a wireless infrastructure (Lu, Col 7 lines 1-8, PVR 200, 200A and EGP server 304 may be coupled via coaxial cable, copper wire, fiber optics, the Internet 302, wireless communication and the like).
25. Referring to claim 15, Lu as modified teaches the system of claim 10 wherein the communication network is the Internet (Lu, Col 7 lines 1-8, Internet 302).
26. Referring to claim 16, Lu as modified teaches the system of claim 10 wherein the server software forwards media from the at least one media peripheral to the set top box circuitry (Lu, Col 6 lines 45-58, server forwarded the requested media from its source to the requesting PVR).

27. Referring to claim 17, Lu as modified teaches the system of claim 10 wherein the server software is at a location separate from the first home and the second home (Lu, figure 3, Col 7 lines 20-24, EGP server 304 resides on a single physical computing device).

28. Referring to claim 18, Lu teaches a system supporting the indirect control of at least one media peripheral, the system comprising:

a first storage (data storage device 218 of PVR 200) in a first home (the place where PVR 200 resides corresponds to “a first home”; Col 6 lines 43-61, Col 1 lines 64-67, figure 3) that stores media (Col 10 lines 26-29, 40-43, data storage device 218 of a PVR is used for storing TV programs for future viewing);

a source (data storage device 218 of PVR 200A, figure 2);

set top box circuitry (PVR 200 corresponds to “set top box circuitry”; Col 5 lines 26-35), in the first home, to exchange media between the first storage and the source (Col 6 lines 54-58, PVR 200A is used to record desired media requested from PVR 200, and once PVR 200A obtains the media, PVR 200A transmits the media to the EGP server 304, which then transmits the media to the requested PVR 200).

server software that supports the exchange of media between the source and the set top box circuitry (Col 6 lines 54-58, PVR 200A is used to record desired media requested from PVR 200, and once PVR 200A obtains the media, PVR 200A transmits the media to the EGP server 304, which then transmits the media to the requested PVR 200).

Lu does not teach at least one media peripheral, in the second home, and the server software that supports the delivery of least one media peripheral command to the

at least one media peripheral, and the exchange of media between the peripheral and the set top box circuitry.

Cohen teaches, at least one media peripheral (digital camera 10'), in a second home (the place where digital camera 10' resides corresponds to "a second home", figure 6A) communicatively coupled to the second storage (device 100b); and server software (server 808) that receives a request that identifies one of the at least one media peripheral, and at least one media peripheral command selected by a user (Col 13 lines 22-33, Col 14 lines 19-27, user requests to server for accessing and downloading data captured from digital camera 10'; user requested download corresponds to "the at least one media peripheral command"), and responds with media from the identified one of the at least one media peripheral (Col 14 lines 19-27, 60-67, image data captured from digital camera 10' is provided to requester 812, 910), at the second home (digital camera 10' resides at second home), according to the at least one media peripheral command (Col 13 lines 22-33, Col 14 lines 19-27, user requests to download).

It would have been obvious to a person with ordinary skill in the art at the time the invention was made to incorporate at least one media peripheral of Cohen in Lu, because both Cohen and Lu teach a first device requests media information stored on a second device via a server (see figure 3 of Lu and figure 6A of Cohen).

A person with ordinary skill in the art would have been motivated to make the modification to Lu would allow the media data of a peripheral to be transmitted to a remote location and allow authorized individuals to gain access and retrieve the media data as taught by Cohen (Col 3 lines 29-31, and Col 4 lines 42-54).

29. Referring to claim 19, Lu as modified teaches the system of claim 18 wherein the media comprises at least one of audio, a still image, video, real-time video, and data (Lu, Col 7 lines 25-28, network 300 operate with any type of media content: audio, video, graphics, information, data, and/or the like in any type of format).
30. Referring to claim 20, and Cohen in combination teaches the system of claim 1, Cohen further teaches wherein the at least one media peripheral command comprises at least one of on, off, select, play, capture, download, erase, delete, zoom, focus, pan, tilt, set compression format, set resolution, set frame rate, set quality, rewind, fast forward, scan, list, skip, and check status (Col 13 lines 22-33, Col 14 lines 19-27 of Cohen, user requests to server for accessing and downloading data captured from digital camera 10'; user requested download corresponds to "the at least one media peripheral command").
31. Referring to claim 21, Lu as modified teaches the system of claim 18 wherein the communication network comprises at least one of a cable infrastructure, a satellite network infrastructure, a digital subscriber line (DSL) infrastructure, an Internet infrastructure, an intranet infrastructure, a wired infrastructure, and a wireless infrastructure (Lu, Col 7 lines 1-8, PVR 200, 200A and EGP server 304 may be coupled via coaxial cable, copper wire, fiber optics, the Internet 302, wireless communication and the like).
32. Referring to claim 22, Lu Cohen in combination teaches the system of claim 18, Cohen further teaches wherein the at least one media peripheral comprises at least one of a digital camera, a digital camcorder, an MP3 player, a home juke-box system, a multi-

media personal digital assistant (PDA), a mobile multi-media gateway device (Col 14 lines 19-27, figure 6C of Cohen, peripheral in Cohen is a digital camera).

Conclusion

33. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant is reminded that in amending in response to a rejection of claims, the patentable novelty must be clearly shown in view of the state of the art disclosed by the references cited and the objection made. Applicant must show how the amendments avoid such references and objections. See 37 CFR 1.111(c).
34. US Publication Number 2003/0043272, Nagao et al., teaches a control system for digital camera and control method for the same.
35. US Patent Number 6,631,247, Motoyama et al., teaches a system for remotely controlling a peripheral device.
36. US Patent Number 7,075,573, Imaeda teaches a remote system for image storage and search.
37. US Patent Number 6,349,324, Tokoro, teaches a system that exchanges images and audio on two ends of a communication network (figure 1).
38. US Patent Number 5,721,815, 5,721,878, and 5,930,493, Ottesen et al., teaches a multimedia server system for communicating multimedia information.
39. US Patent Number 7,080,400, Navar, teaches method for distributed storage and presentation of multimedia in a cable network environment.

Art Unit: 2155

40. US Patent Number 6,693,896, Utsumi et al., teaches information receiving device and method, information release device, and information communication system.
41. US Patent Number 6,480,889, Saito et al., teaches scheme for managing nodes connected to a home network according to their physical locations.
42. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Liang-che Alex Wang whose telephone number is (571)272-3992. The examiner can normally be reached on Monday thru Friday, 8:30 am to 5:00 pm.
43. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Saleh Najjar can be reached on (571)272-4006. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
44. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
